20%

Assume you have a bar graph. Which of the following happens when we group by labels in a view?

- ☐ A) The colors of the members selected are now the same, and different for the rest of the members.
- ☒ B) A new mark (bar) is created, which consolidates all members of the group.
- ☐ C) Nothing changes in the view, but a group is created in the Dimensions shelf.
- ☐ D) None of the above

## Correct!

Explanation:

The correct answer is

A new mark (bar) is created, which consolidates all members of the group
